

SUBSPACE LATTICE

Command the Fleet. Control the Lattice.

FLEET TACTICS · SIGNAL WARFARE · SOVEREIGN SPACE

Every ship is a weapon.

Every signal redraws the battlefield.

THE BATTLE FOR THE LATTICE

You do not conquer space.

You make it yours.

Your fleet is small, and every move changes what it can see, where it can strike, and which systems still work. Push too far and your relay breaks. Hold back and the opposing net claims the sector. Victory belongs to the commander who turns position into pressure—and pressure into one decisive opening.

ESTABLISH THE SIGNAL

Keep your Escorts linked and project Sovereign Space from the Command Hub. Your Formation is your reach—and your lifeline.

TURN SPACE INTO A WEAPON

Catch enemy ships inside your net to Target Lock their systems. Shape firing lanes for Beams and leave gaps only you can exploit.

FORCE THE FINAL MOVE

Strike the enemy Hub—or integrate the sector until hiding is no longer possible. The lattice makes every stalemate temporary.

Collapse at Sector 11

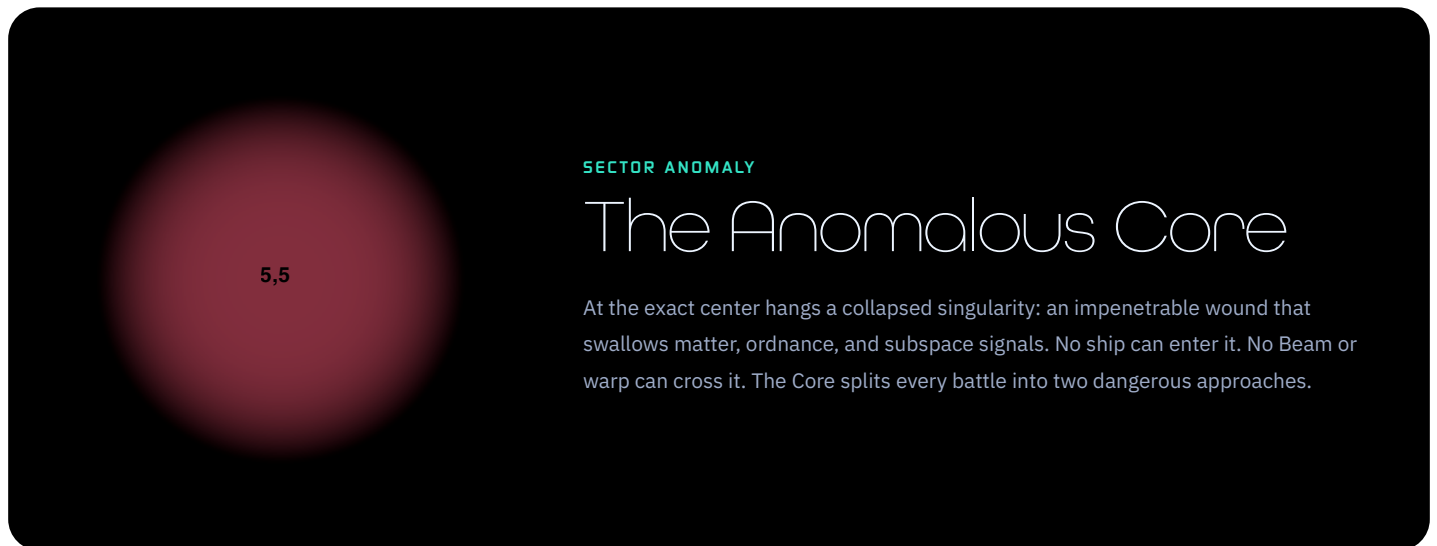

“Space isn’t empty—it’s unclaimed. Out here, you don’t just sail through a sector. You weave the Subspace Lattice through it, thread by thread, and make it yours.”

THE SITUATION

Nothing beyond your
Formation is mapped.

Deep inside contested territory lies Sector 11, a strategic gateway shattered when a stellar core imploded. Two task forces drop into an electromagnetic dead zone neither faction can afford to surrender.

Heavy particle weapons cannot fire into unmapped space. Your fleet survives by weaving a synchronized signal network anchored to its flagship and carried forward, relay by relay, into the dark.

THE LIVING NETWORK

Make the dark answer to you.

Sovereign Space

Your Sensor Net is territory, firing solution, and lifeline at once. Linked Escorts extend it; isolated relays go dark.

Contested Space

Where opposing networks collide, electronic warfare neutralizes both. The overlap belongs to neither commander.

Target Lock

Cross into hostile glow and their network has you. Special systems fail; escape becomes one crawling step at a time.

FLEET ASSETS

Every hull serves the signal.

FLAGSHIP · POWER ANCHOR

Command Hub

The brain of the fleet and source of its first signal halo. If it falls, the network collapses and the mission ends.

SUBSPACE REPEATERS

Escorts

Hardy ships that push into unmapped dark and carry the Lattice outward. Break their chain to the Hub and forward coverage goes dark.

LATTICE DREADNOUGHTS

Beams

Long-range particle lances that ride energized channels. Outside their own Sensor Net, they have no lane to fire through.

PHASE RUNNERS

Infiltrators

Folding-drive strike craft that jump through unclaimed space. Hostile coverage Target Locks their engines and kills the warp.

AEGIS VANGUARD

Carriers

Optional capital hull that combines orthogonal and diagonal routing into absolute omni-directional grid control. However, this massive dreadnought is bound to a strict Hub-anchor. To execute a full subspace slide, it must draw power directly from the Command Hub's natural radiation halo at the start of its maneuver. Drift beyond that tether, and its capacitors starve, reducing it to a crawl until it re-enters the flagship's power grid.

SLIPSTREAM CUTTER

Refractor

Optional wing dreadnought. Where a Beam relies on the orthogonal channels of your network, the Refractor exploits the diagonal subspace seams of Sovereign Space. It can slice past the Anomaly's blocked axes, opening firing vectors a Beam could never reach. Like all heavy artillery, it requires an active telemetry link; strand it outside your glow, and its engines go dead.

Initiative Relay · Vanguard node

The commander who commits first receives one extra forward Escort: visible compensation for revealing their hand early.

MISSION COMPLETION

Secure the sector.

01 DECAPITATION

Surgical Strike

Flank the relay line, open a Beam lane, and destroy the opposing Command Hub. Their fleet goes dark. Mission accomplished.

02 TOTAL DOMINANCE

Sector Integration

When the sector clock arms, expand Sovereign Space across 45% of the arena and force an emergency fleet shutdown.

03 FROZEN

Lockout

Leave the opposing fleet with no legal maneuver anywhere on the grid. In Sector 11, immobility is defeat—not stalemate.
