

# Subspace Lattice

The Advanced Manual

Three fully annotated games from the Fleet Academy

Interstellar Warp Gaming Federation

Digital Defiance

Rules version **hybrid-fleet**

Companion to the Official Rules ([rules.pdf](#))

## Abstract

This manual replays the three guided missions from the in-game academy with every ply diagrammed and explained: a short Surgical Strike highlight reel, a full 57-ply battle, and a **hybrid-fleet** siege decided by the sector clock. Part I teaches how to think — reading positions, valuing moves, and looking ahead. Parts II–IV walk the games. Each diagram shows the position *after* the numbered ply; the moved ship’s squares glow.

## Part I

# How to think in Subspace Lattice

## 1 How to read a position

Every diagram in this manual shows four things at once. Learn to scan them in this order:

1. **Hub safety.** Where is each Command Hub, and can anything reach it *next ply*? This question outranks every other. Most decided fleet games end by Surgical Strike, and most Surgical Strikes are walk-ins that the loser could have seen one move earlier.
2. **The nets.** Blue is White's Sensor Net, red is Black's, purple overlap is Contested Space (it counts for neither side's sector coverage). The net is not decoration: Beams may only slide inside their own glow, and an enemy standing in your net is Target Locked.
3. **Locked ships.** A Target Locked ship moves one orthogonal step, nothing else. A locked Beam is a wall ornament; a locked Infiltrator cannot warp. Count locked ships before you count material.
4. **Link integrity.** Escorts only radiate while chained to the Hub (friendly ships no more than two squares apart). One careless step can silently unplug half your net.

## 2 What a move is worth

Chess players value material; Go players value territory. Lattice asks you to price three currencies at once:

**Material** Captures matter, but a dead Escort that was not radiating is worth less than one holding your net together.

**Coverage** Net cells are mobility for your Beams, Target Locks against the enemy, and — after the sector clock arms — a win condition.

**Tempo** White moves first and holds the Initiative Relay Escort as compensation for having to commit first. Spending a ply on a move that neither threatens nor builds hands the initiative back.

The recurring beginner error is over-valuing material: trading an active linked Escort for a passive one is usually a loss even though the count says even.

## 3 Thinking ahead: the three-question scan

Before every move, in order:

1. **Can I take their Hub?** If yes, play it. The game ends.
2. **Can they take mine after my intended move?** Simulate your candidate, then check every enemy reply against your Hub square. If any reply lands there, the candidate is illegal in spirit — find another. This is the discipline the academy drills as *refuse the hang*.
3. **What does the move do for the nets?** Prefer moves that answer two ways at once: extend coverage *and* threaten, retreat *and* keep the chain linked.

Depth beyond one reply comes from asking question 2 recursively about forcing lines only: captures, Hub threats, and moves that lock a key enemy ship. Quiet positions do not need deep trees; sharp ones do.

## 4 Openings: the first ten plies

The mirrored fleet plus White's relay Escort makes openings about *structure*, not gambits:

- Advance central Escorts first — they carry the net forward and screen the Hub file.
- Keep every Escort within two squares of the chain. A linked fleet walks; an unlinked one crawls.
- Beams want *prepared* files: slide them early inside your net to a lane that will point at the enemy Hub once coverage arrives.
- The Gravity Well at (5,5) splits the board. Decide early which side of it your pressure will live on.

## 5 Midgame: pressure without overextension

Mission 2 is the model: net pressure, Target Lock threats, and probing for a Hub mistake — not racing to paint the map. Overextended ships end up inside the enemy glow, locked, and become targets. Watch for the moment an enemy Beam's lane and your Hub share a file: that is when defensive plies stop being optional.

## 6 Endgame: strike or clock

Two finishes exist. If a Hub hunt is winning, convert like Mission 1 and 2: clear the lane, refuse the hang, strike. If both fleets dig in, the sector clock (armed at ply 100 under fleet rules) turns coverage into the win condition — Mission 3. Late game, every net cell is a point on the scoreboard, Contested Space is a weapon (project into their net to stall their streak), and passive defense finally loses on the clock instead of drawing forever.

## Part II

## The annotated games

## 7 Mission 1 — Surgical Strike, the highlight reel

Guided mission 1 of 3. A short, fixed highlight reel—not a full match. Tap Play and watch each order. White grows the net, refuses a Hub hang, then Surgical Strike. Black shows the usual counterplay and death-trap temptation.

Starting position.

**Ply 1 — White Escort (5,3)→(5,4)**

White opens by pushing the Initiative Relay Escort. Going first already has a forward foothold; deepening it grows midboard coverage so later Beam fire has somewhere to live. [net 34–42 • 4 ships locked]

**Ply 2 — Black Escort (8,8)→(8,7)**

Black does not yet contest the Beam's file. A quiet side step keeps options open while White telegraphs net-building on the left. [net 34–42 • 4 ships locked]

**Ply 3 — White Escort (3,2)→(3,3)**

White's Beam is still boxed inside a small net. Sliding an Escort beside the file extends the blue glow toward Black's Hub without sitting on the lane (which would block the shot). [net 36–42 • 5 ships locked]

**Ply 4 — Black Escort (6,1)→(5,1)**

Black reaches for a classic beginner trap: step next to White's Hub. If White greedily stares at the Beam shot and ignores this, Black takes Surgical Strike next. [net 36–42 • 5 ships locked • **Hub en prise!**]

#### Ply 5 — White Escort (4,1)→(5,1)

White refuses the hang. The prepared Beam shot can wait one ply—Hub safety always comes first. Capture the threat. [captures Escort • net 36–42 • 4 ships locked]

#### Ply 6 — Black Escort (8,7)→(8,6)

Black's tactical shot failed. With no immediate recapture, Black shuffles—tempo lost, Hub still sitting on White's Beam file. [net 36–42 • 4 ships locked • Hub en prise!]

#### Ply 7 — White Beam (2,0)→(2,4)

Net open, Hub safe, enemy Hub on the Beam's file. White converts preparation into Surgical Strike—the usual way fleet games end when the plan works. [captures Command Hub • net 36–0 • White wins]

**Debrief.** Mission complete. White wins by Surgical Strike. Next: a chess-length battle (~50 plies), then a clock finish when Hubs survive.

## 8 Mission 2 — A standard battle (57 plies)

Guided mission 2 of 3. A fixed 57-ply fleet game (no live AI)—chess ballpark. Infiltrators omitted so the story stays on Escorts, Beams, and the Hub hunt. Use “Play next 5” to skim quiet stretches. White wins by Surgical Strike.

Starting position.

### Ply 1 — White Beam (2,0)→(2,3)

White slides a Beam inside the blue Sensor Net. Beams only travel in that glow—this is repositioning inside the box until Escorts expand it. [net 31–28]

### Ply 2 — Black Beam (2,10)→(2,7)

Black slides a Beam inside the blue Sensor Net. Beams only travel in that glow—this is repositioning inside the box until Escorts expand it. [net 31–28]

### Ply 3 — White Beam (8,0)→(8,3)

White slides a Beam inside the blue Sensor Net. Beams only travel in that glow—this is repositioning inside the box until Escorts expand it. [net 31–28]

### Ply 4 — Black Beam (2,7)→(5,7)

Black slides a Beam inside the blue Sensor Net. Beams only travel in that glow—this is repositioning inside the box until Escorts expand it. [net 31–28]

**Ply 5 — White Beam (8,3)→(6,3)**

White slides a Beam inside the blue Sensor Net. Beams only travel in that glow—this is repositioning inside the box until Escorts expand it. [net 31–28]

**Ply 6 — Black Beam (8,10)→(8,7)**

Black slides a Beam inside the blue Sensor Net. Beams only travel in that glow—this is repositioning inside the box until Escorts expand it. [net 31–28]

**Ply 7 — White Beam (2,3)→(4,3)**

White slides a Beam inside the blue Sensor Net. Beams only travel in that glow—this is repositioning inside the box until Escorts expand it. [net 31–28]

**Ply 8 — Black Beam (8,7)→(6,7)**

Black slides a Beam inside the blue Sensor Net. Beams only travel in that glow—this is repositioning inside the box until Escorts expand it. [net 31–28]

**Ply 9 — White Escort (4,0)→(4,1)**

Opening: White advances an Escort to (4,1), linking coverage and contesting the midboard before big tactics appear. [net 31–28]

**Ply 10 — Black Escort (5,9)→(5,8)**

Opening: Black advances an Escort to (5,8), linking coverage and contesting the midboard before big tactics appear. [net 31–28]

**Ply 11 — White Escort (6,0)→(6,1)**

Opening: White advances an Escort to (6,1), linking coverage and contesting the midboard before big tactics appear. [net 31–28]

**Ply 12 — Black Command Hub (5,10)→(5,9)**

Black steps the Hub toward (5,9). The Hub is both king and radio tower—every move changes the net's core. [net 31–35]

**Ply 13 — White Escort (5,3)→(5,4)**

Opening: White advances an Escort to (5,4), linking coverage and contesting the midboard before big tactics appear. [net 34–35]

**Ply 14 — Black Escort (6,10)→(5,10)**

Opening: Black advances an Escort to (5,10), linking coverage and contesting the midboard before big tactics appear. [net 34–35]

**Ply 15 — White Beam (6,3)→(6,5)**

White uses a Beam lane to (6,5). Long slides mean the net already covers the path. [net 34–35]

**Ply 16 — Black Beam (5,7)→(5,6)**

Black uses a Beam lane to (5,6). Long slides mean the net already covers the path. [net 34–35]

**Ply 17 — White Beam (4,3)→(4,5)**

White uses a Beam lane to (4,5). Long slides mean the net already covers the path. [net 28–35]

**Ply 18 — Black Beam (6,7)→(5,7)**

Black uses a Beam lane to (5,7). Long slides mean the net already covers the path. [net 28–35]

**Ply 19 — White Escort (4,1)→(4,2)**

Midgame: White moves an Escort to (4,2). Typical play is net pressure, Target Lock threats, and probing for a Hub mistake—not racing to paint the map. [net 34–35]

**Ply 20 — Black Escort (4,10)→(4,9)**

Midgame: Black moves an Escort to (4,9). Typical play is net pressure, Target Lock threats, and probing for a Hub mistake—not racing to paint the map. [net 34–35]

### Ply 21 — White Escort (4,2)→(5,2)

Midgame: White moves an Escort to (5,2). Typical play is net pressure, Target Lock threats, and probing for a Hub mistake—not racing to paint the map. [net 34-35]

### Ply 22 — Black Escort (4,9)→(4,8)

Midgame: Black moves an Escort to (4,8). Typical play is net pressure, Target Lock threats, and probing for a Hub mistake—not racing to paint the map. [net 34-35]

### Ply 23 — White Escort (5,2)→(5,3)

Midgame: White moves an Escort to (5,3). Typical play is net pressure, Target Lock threats, and probing for a Hub mistake—not racing to paint the map. [net 34-35]

### Ply 24 — Black Escort (4,8)→(4,7)

Midgame: Black moves an Escort to (4,7). Typical play is net pressure, Target Lock threats, and probing for a Hub mistake—not racing to paint the map. [net 34-35]

### Ply 25 — White Escort (5,1)→(5,2)

Midgame: White moves an Escort to (5,2). Typical play is net pressure, Target Lock threats, and probing for a Hub mistake—not racing to paint the map. [net 34–35]

### Ply 26 — Black Escort (4,7)→(4,6)

Midgame: Black moves an Escort to (4,6). Typical play is net pressure, Target Lock threats, and probing for a Hub mistake—not racing to paint the map. [net 34–38 • 1 ship locked]

### Ply 27 — White Beam (4,5)→(4,6)

White trades or takes with a Beam at (4,6), reshaping the net fight. [captures Escort • net 34–35 • 1 ship locked]

### Ply 28 — Black Beam (5,6)→(4,6)

Black trades or takes with a Beam at (4,6), reshaping the net fight. [captures Beam • net 34–35]

### Ply 29 — White Escort (6,1)→(5,1)

Midgame: White moves an Escort to (5,1). Typical play is net pressure, Target Lock threats, and probing for a Hub mistake—not racing to paint the map. [net 34–35]

### Ply 30 — Black Beam (4,6)→(5,6)

Black uses a Beam lane to (5,6). Long slides mean the net already covers the path. [net 34–35]

### Ply 31 — White Command Hub (5,0)→(6,1)

White steps the Hub toward (6,1). The Hub is both king and radio tower—every move changes the net's core. [net 38–35]

### Ply 32 — Black Command Hub (5,9)→(6,8)

Black steps the Hub toward (6,8). The Hub is both king and radio tower—every move changes the net's core. [net 38–42 • 1 ship locked]

### Ply 33 — White Command Hub (6,1)→(6,2)

White steps the Hub toward (6,2). The Hub is both king and radio tower—every move changes the net's core. [net 42-42 • 1 ship locked]

### Ply 34 — Black Escort (5,10)→(5,9)

Midgame: Black moves an Escort to (5,9). Typical play is net pressure, Target Lock threats, and probing for a Hub mistake—not racing to paint the map. [net 42-42 • 1 ship locked]

### Ply 35 — White Command Hub (6,2)→(6,3)

White steps the Hub toward (6,3). The Hub is both king and radio tower—every move changes the net's core. [net 49-42 • 2 ships locked]

### Ply 36 — Black Escort (5,9)→(6,9)

Midgame: Black moves an Escort to (6,9). Typical play is net pressure, Target Lock threats, and probing for a Hub mistake—not racing to paint the map. [net 49-42 • 2 ships locked]

**Ply 37 — White Escort (5,4)→(6,4)**

Midgame: White moves an Escort to (6,4). Typical play is net pressure, Target Lock threats, and probing for a Hub mistake—not racing to paint the map. [net 49–42 • 2 ships locked]

**Ply 38 — Black Beam (5,7)→(6,7)**

Black uses a Beam lane to (6,7). Long slides mean the net already covers the path. [net 49–42 • 2 ships locked]

**Ply 39 — White Escort (5,3)→(5,4)**

Midgame: White moves an Escort to (5,4). Typical play is net pressure, Target Lock threats, and probing for a Hub mistake—not racing to paint the map. [net 49–42 • 2 ships locked]

**Ply 40 — Black Beam (6,7)→(6,5)**

Black trades or takes with a Beam at (6,5), reshaping the net fight. [captures Beam • net 49–42 • 2 ships locked]

#### Ply 41 — White Escort (6,4)→(6,5)

White trades or takes with an Escort at (6,5), reshaping the net fight. [captures Beam • net 49–42 • 2 ships locked]

#### Ply 42 — Black Escort (5,8)→(5,7)

Midgame: Black moves an Escort to (5,7). Typical play is net pressure, Target Lock threats, and probing for a Hub mistake—not racing to paint the map. [net 49–42 • 2 ships locked]

#### Ply 43 — White Escort (5,1)→(6,1)

Midgame: White moves an Escort to (6,1). Typical play is net pressure, Target Lock threats, and probing for a Hub mistake—not racing to paint the map. [net 49–42 • 2 ships locked]

#### Ply 44 — Black Escort (5,7)→(6,7)

Midgame: Black moves an Escort to (6,7). Typical play is net pressure, Target Lock threats, and probing for a Hub mistake—not racing to paint the map. [net 49–42 • 2 ships locked]

### Ply 45 — White Escort (5,2)→(5,3)

Midgame: White moves an Escort to (5,3). Typical play is net pressure, Target Lock threats, and probing for a Hub mistake—not racing to paint the map. [net 49–42 • 2 ships locked]

### Ply 46 — Black Beam (5,6)→(6,6)

Black uses a Beam lane to (6,6). Long slides mean the net already covers the path. [net 49–42 • 2 ships locked]

### Ply 47 — White Escort (6,5)→(6,6)

White trades or takes with an Escort at (6,6), reshaping the net fight. [captures Beam • net 52–42 • 2 ships locked]

### Ply 48 — Black Escort (6,7)→(6,6)

Black trades or takes with an Escort at (6,6), reshaping the net fight. [captures Escort • net 49–42 • 1 ship locked]

#### Ply 49 — White Escort (5,4)→(6,4)

Midgame: White moves an Escort to (6,4). Typical play is net pressure, Target Lock threats, and probing for a Hub mistake—not racing to paint the map. [net 49–42 • 1 ship locked]

#### Ply 50 — Black Command Hub (6,8)→(6,7)

Black steps the Hub toward (6,7). The Hub is both king and radio tower—every move changes the net's core. [net 49–49 • 2 ships locked]

#### Ply 51 — White Escort (5,3)→(5,4)

Late game: White plays Escort to (5,4). With the board tense, each step either threatens the Hub, expands a finishing net, or refuses a hang. [net 49–49 • 3 ships locked]

#### Ply 52 — Black Escort (6,9)→(6,8)

Late game: Black plays Escort to (6,8). With the board tense, each step either threatens the Hub, expands a finishing net, or refuses a hang. [net 49–49 • 3 ships locked]

### Ply 53 — White Escort (6,1)→(6,2)

Late game: White plays Escort to (6,2). With the board tense, each step either threatens the Hub, expands a finishing net, or refuses a hang. [net 49–49 • 3 ships locked]

### Ply 54 — Black Escort (6,6)→(6,5)

Late game: Black plays Escort to (6,5). With the board tense, each step either threatens the Hub, expands a finishing net, or refuses a hang. [net 49–49 • 3 ships locked]

### Ply 55 — White Escort (6,4)→(6,5)

White removes a defender. Captures this late usually open the Hub or collapse a relay. [captures Escort • net 49–49 • 2 ships locked]

### Ply 56 — Black Command Hub (6,7)→(6,6)

Black steps the Hub toward (6,6). The Hub is both king and radio tower—every move changes the net's core. [net 49–49 • 4 ships locked • Hub en prise!]

### Ply 57 — White Escort (6,5)→(6,6)

White captures the enemy Command Hub with an Escort. The battle ends immediately—this is the primary win most fleet games are playing toward. [captures Command Hub • net 52-0 • **White wins**]

**Debrief.** Mission complete. White wins by Surgical Strike after 57 plies. That length is normal for hybrid-fleet when the Hub hunt succeeds. Next: what happens when both Hubs survive into the sector clock.

## 9 Mission 3 — When the clock decides (115 plies)

The full 115-ply record of the academy's sector-clock mission. In the app you join near activation (ply 100); here you can study the whole siege: how both fleets dig in, why no Hub ever falls, and how coverage — not capture — finally ends it. White wins by Sector Integration.

Starting position.

**Ply 1 — White Escort (4,0)→(4,1)**

Opening: White advances an Escort to (4,1), linking coverage and contesting the midboard before big tactics appear. [net 31–28]

**Ply 2 — Black Escort (5,9)→(5,8)**

Opening: Black advances an Escort to (5,8), linking coverage and contesting the midboard before big tactics appear. [net 31–28]

**Ply 3 — White Escort (5,3)→(5,4)**

Opening: White advances an Escort to (5,4), linking coverage and contesting the midboard before big tactics appear. [net 28–28]

**Ply 4 — Black Escort (5,8)→(5,7)**

Opening: Black advances an Escort to (5,7), linking coverage and contesting the midboard before big tactics appear. [net 28–28]

**Ply 5 — White Escort (4,1)→(4,2)**

Opening: White advances an Escort to (4,2), linking coverage and contesting the midboard before big tactics appear. [net 34–28]

**Ply 6 — Black Escort (5,7)→(5,6)**

Opening: Black advances an Escort to (5,6), linking coverage and contesting the midboard before big tactics appear. [net 34–28]

**Ply 7 — White Escort (6,0)→(6,1)**

Opening: White advances an Escort to (6,1), linking coverage and contesting the midboard before big tactics appear. [net 34–28]

**Ply 8 — Black Escort (4,10)→(4,9)**

Opening: Black advances an Escort to (4,9), linking coverage and contesting the midboard before big tactics appear. [net 34–28]

**Ply 9 — White Escort (5,1)→(5,2)**

Opening: White advances an Escort to (5,2), linking coverage and contesting the midboard before big tactics appear. [net 34–28]

**Ply 10 — Black Escort (4,9)→(4,8)**

Opening: Black advances an Escort to (4,8), linking coverage and contesting the midboard before big tactics appear. [net 34–34]

**Ply 11 — White Escort (5,2)→(5,3)**

Opening: White advances an Escort to (5,3), linking coverage and contesting the midboard before big tactics appear. [net 34–34]

**Ply 12 — Black Escort (6,10)→(6,9)**

Opening: Black advances an Escort to (6,9), linking coverage and contesting the midboard before big tactics appear. [net 34–34]

**Ply 13 — White Escort (6,1)→(6,2)**

Opening: White advances an Escort to (6,2), linking coverage and contesting the midboard before big tactics appear. [net 34–34]

**Ply 14 — Black Escort (4,8)→(4,7)**

Opening: Black advances an Escort to (4,7), linking coverage and contesting the midboard before big tactics appear. [net 34–35]

**Ply 15 — White Escort (4,2)→(4,3)**

Midgame: White moves an Escort to (4,3). Typical play is net pressure, Target Lock threats, and probing for a Hub mistake—not racing to paint the map. [net 35–35]

**Ply 16 — Black Escort (4,7)→(4,6)**

Midgame: Black moves an Escort to (4,6). Typical play is net pressure, Target Lock threats, and probing for a Hub mistake—not racing to paint the map. [net 35–28]

### Ply 17 — White Escort (4,3)→(4,4)

Midgame: White moves an Escort to (4,4). Typical play is net pressure, Target Lock threats, and probing for a Hub mistake—not racing to paint the map. [net 36–28]

### Ply 18 — Black Escort (6,9)→(6,8)

Midgame: Black moves an Escort to (6,8). Typical play is net pressure, Target Lock threats, and probing for a Hub mistake—not racing to paint the map. [net 36–36]

### Ply 19 — White Escort (6,2)→(6,3)

Midgame: White moves an Escort to (6,3). Typical play is net pressure, Target Lock threats, and probing for a Hub mistake—not racing to paint the map. [net 28–36]

### Ply 20 — Black Escort (6,8)→(6,7)

Midgame: Black moves an Escort to (6,7). Typical play is net pressure, Target Lock threats, and probing for a Hub mistake—not racing to paint the map. [net 28–28]

### Ply 21 — White Escort (6,3)→(6,4)

Midgame: White moves an Escort to (6,4). Typical play is net pressure, Target Lock threats, and probing for a Hub mistake—not racing to paint the map. [net 28–28]

### Ply 22 — Black Escort (4,6)→(4,5)

Midgame: Black moves an Escort to (4,5). Typical play is net pressure, Target Lock threats, and probing for a Hub mistake—not racing to paint the map. [net 28–28]

### Ply 23 — White Escort (4,4)→(4,5)

White trades or takes with an Escort at (4,5), reshaping the net fight. [captures Escort • net 28–28]

### Ply 24 — Black Escort (6,7)→(6,6)

Midgame: Black moves an Escort to (6,6). Typical play is net pressure, Target Lock threats, and probing for a Hub mistake—not racing to paint the map. [net 28–28]

### Ply 29 — White Beam (8,1)→(4,1)

White uses a Beam lane to (4,1). Long slides mean the net already covers the path. [net 39–35 • 2 ships locked]

### Ply 30 — Black Beam (2,10)→(3,10)

Black uses a Beam lane to (3,10). Long slides mean the net already covers the path. [net 39–35 • 2 ships locked]

### Ply 31 — White Beam (4,1)→(2,1)

White uses a Beam lane to (2,1). Long slides mean the net already covers the path. [net 28–35]

### Ply 32 — Black Beam (3,10)→(6,10)

Black uses a Beam lane to (6,10). Long slides mean the net already covers the path. [net 28–35]

**Ply 33 — White Command Hub (5,0)→(6,1)**  
 White steps the Hub toward (6,1). The Hub is both king and radio tower—every move changes the net's core. [net 42–35 • 2 ships locked]

**Ply 34 — Black Beam (6,10)→(5,10)**  
 Black uses a Beam lane to (5,10). Long slides mean the net already covers the path. [net 42–35 • 2 ships locked]

**Ply 35 — White Command Hub (6,1)→(6,2)**  
 White steps the Hub toward (6,2). The Hub is both king and radio tower—every move changes the net's core. [net 45–35 • 2 ships locked]

**Ply 36 — Black Command Hub (5,9)→(6,8)**  
 Black steps the Hub toward (6,8). The Hub is both king and radio tower—every move changes the net's core. [net 45–45 • 4 ships locked]

**Ply 37 — White Beam (2,1)→(3,1)**

White uses a Beam lane to (3,1). Long slides mean the net already covers the path. [net 45-45 • 4 ships locked]

**Ply 38 — Black Command Hub (6,8)→(7,9)**

Black steps the Hub toward (7,9). The Hub is both king and radio tower—every move changes the net's core. [net 45-35 • 2 ships locked]

**Ply 39 — White Command Hub (6,2)→(5,2)**

White steps the Hub toward (5,2). The Hub is both king and radio tower—every move changes the net's core. [net 45-35 • 2 ships locked]

**Ply 40 — Black Beam (8,10)→(10,10)**

Black uses a Beam lane to (10,10). Long slides mean the net already covers the path. [net 45-35 • 2 ships locked]

**Ply 41 — White Command Hub (5,2)→(4,2)**  
 White steps the Hub toward (4,2). The Hub is both king and radio tower—every move changes the net's core. [net 45–35 • 2 ships locked]

**Ply 42 — Black Command Hub (7,9)→(8,10)**  
 Black steps the Hub toward (8,10). The Hub is both king and radio tower—every move changes the net's core. [net 45–24 • 2 ships locked]

**Ply 43 — White Command Hub (4,2)→(4,3)**  
 White steps the Hub toward (4,3). The Hub is both king and radio tower—every move changes the net's core. [net 49–24 • 2 ships locked]

**Ply 44 — Black Beam (10,10)→(10,8)**  
 Black uses a Beam lane to (10,8). Long slides mean the net already covers the path. [net 49–24 • 2 ships locked]

**Ply 45 — White Command Hub (4,3)→(4,4)**  
 White steps the Hub toward (4,4). The Hub is both king and radio tower—every move changes the net's core. [net 49–24 • 2 ships locked]

**Ply 46 — Black Beam (10,8)→(10,9)**  
 Black uses a Beam lane to (10,9). Long slides mean the net already covers the path. [net 49–24 • 2 ships locked]

**Ply 47 — White Beam (2,0)→(2,3)**  
 White uses a Beam lane to (2,3). Long slides mean the net already covers the path. [net 49–24 • 2 ships locked]

**Ply 48 — Black Beam (10,9)→(10,7)**  
 Black uses a Beam lane to (10,7). Long slides mean the net already covers the path. [net 49–24 • 2 ships locked]

### Ply 49 — White Beam (3,1)→(6,1)

White uses a Beam lane to (6,1). Long slides mean the net already covers the path. [net 49-24 • 2 ships locked]

### Ply 50 — Black Command Hub (8,10)→(7,10)

Black steps the Hub toward (7,10). The Hub is both king and radio tower—every move changes the net's core. [net 49-28 • 2 ships locked]

### Ply 51 — White Beam (6,1)→(6,5)

White trades or takes with a Beam at (6,5), reshaping the net fight. [captures Escort • net 49-28 • 1 ship locked]

### Ply 52 — Black Command Hub (7,10)→(8,10)

Black steps the Hub toward (8,10). The Hub is both king and radio tower—every move changes the net's core. [net 49-24 • 1 ship locked]

### Ply 53 — White Command Hub (4,4)→(3,5)

White steps the Hub toward (3,5). The Hub is both king and radio tower—every move changes the net's core. [net 49–24 • 1 ship locked]

### Ply 54 — Black Command Hub (8,10)→(9,9)

Black steps the Hub toward (9,9). The Hub is both king and radio tower—every move changes the net's core. [net 49–25 • 1 ship locked]

### Ply 55 — White Beam (2,3)→(2,7)

White uses a Beam lane to (2,7). Long slides mean the net already covers the path. [net 49–25 • 1 ship locked]

### Ply 56 — Black Beam (10,7)→(6,7)

Black uses a Beam lane to (6,7). Long slides mean the net already covers the path. [net 49–25 • 2 ships locked]

**Ply 57 — White Beam (6,5)→(6,7)**

White trades or takes with a Beam at (6,7), reshaping the net fight. [captures Beam • net 49–25 • 2 ships locked]

**Ply 58 — Black Command Hub (9,9)→(8,8)**

Black steps the Hub toward (8,8). The Hub is both king and radio tower—every move changes the net's core. [net 49–36 • 2 ships locked]

**Ply 59 — White Beam (6,7)→(6,6)**

White uses a Beam lane to (6,6). Long slides mean the net already covers the path. [net 49–36 • 2 ships locked]

**Ply 60 — Black Escort (5,6)→(6,6)**

Black trades or takes with an Escort at (6,6), reshaping the net fight. [captures Beam • net 49–36 • 1 ship locked]

### Ply 61 — White Beam (2,7)→(2,8)

White uses a Beam lane to (2,8). Long slides mean the net already covers the path. [net 49–36 • 1 ship locked]

### Ply 62 — Black Escort (6,6)→(6,5)

Midgame: Black moves an Escort to (6,5). Typical play is net pressure, Target Lock threats, and probing for a Hub mistake—not racing to paint the map. [net 49–36 • 1 ship locked]

### Ply 63 — White Command Hub (3,5)→(2,5)

White steps the Hub toward (2,5). The Hub is both king and radio tower—every move changes the net's core. [net 46–36 • 1 ship locked]

### Ply 64 — Black Command Hub (8,8)→(8,7)

Black steps the Hub toward (8,7). The Hub is both king and radio tower—every move changes the net's core. [net 46–42 • 2 ships locked]

**Ply 65 — White Command Hub (2,5)→(1,6)**  
 White steps the Hub toward (1,6). The Hub is both king and radio tower—every move changes the net's core. [net 35-42 • 1 ship locked]

**Ply 66 — Black Command Hub (8,7)→(7,8)**  
 Black steps the Hub toward (7,8). The Hub is both king and radio tower—every move changes the net's core. [net 35-42 • 1 ship locked]

**Ply 67 — White Command Hub (1,6)→(1,5)**  
 White steps the Hub toward (1,5). The Hub is both king and radio tower—every move changes the net's core. [net 35-42 • 1 ship locked]

**Ply 68 — Black Command Hub (7,8)→(8,9)**  
 Black steps the Hub toward (8,9). The Hub is both king and radio tower—every move changes the net's core. [net 35-30]

**Ply 69 — White Beam (2,8)→(2,5)**

White uses a Beam lane to (2,5). Long slides mean the net already covers the path. [net 44–30 • 1 ship locked]

**Ply 70 — Black Beam (5,10)→(5,6)**

Black uses a Beam lane to (5,6). Long slides mean the net already covers the path. [net 44–30 • 2 ships locked]

**Ply 71 — White Command Hub (1,5)→(0,6)**

White steps the Hub toward (0,6). The Hub is both king and radio tower—every move changes the net's core. [net 42–30 • 2 ships locked]

**Ply 72 — Black Beam (5,6)→(4,6)**

Black uses a Beam lane to (4,6). Long slides mean the net already covers the path. [net 42–30 • 2 ships locked]

### Ply 73 — White Escort (4,5)→(4,6)

White trades or takes with an Escort at (4,6), reshaping the net fight. [captures Beam • net 44–30 • 1 ship locked]

### Ply 74 — Black Command Hub (8,9)→(7,8)

Black steps the Hub toward (7,8). The Hub is both king and radio tower—every move changes the net's core. [net 44–42 • 2 ships locked]

### Ply 75 — White Escort (4,6)→(4,5)

Midgame: White moves an Escort to (4,5). Typical play is net pressure, Target Lock threats, and probing for a Hub mistake—not racing to paint the map. [net 42–42 • 2 ships locked]

### Ply 76 — Black Command Hub (7,8)→(7,9)

Black steps the Hub toward (7,9). The Hub is both king and radio tower—every move changes the net's core. [net 42–35 • 1 ship locked]

**Ply 77 — White Beam (2,5)→(0,5)**

White uses a Beam lane to (0,5). Long slides mean the net already covers the path. [net 28–35]

**Ply 78 — Black Command Hub (7,9)→(8,9)**

Black steps the Hub toward (8,9). The Hub is both king and radio tower—every move changes the net's core. [net 28–30]

**Ply 79 — White Beam (0,5)→(0,3)**

White uses a Beam lane to (0,3). Long slides mean the net already covers the path. [net 28–30]

**Ply 80 — Black Command Hub (8,9)→(9,9)**

Black steps the Hub toward (9,9). The Hub is both king and radio tower—every move changes the net's core. [net 28–25]

### Ply 81 — White Beam (0,3)→(3,3)

White uses a Beam lane to (3,3). Long slides mean the net already covers the path. [net 28–25]

### Ply 82 — Black Command Hub (9,9)→(8,9)

Black steps the Hub toward (8,9). The Hub is both king and radio tower—every move changes the net's core. [net 28–30]

### Ply 83 — White Beam (3,3)→(3,7)

White uses a Beam lane to (3,7). Long slides mean the net already covers the path. [net 28–30]

### Ply 84 — Black Command Hub (8,9)→(7,10)

Black steps the Hub toward (7,10). The Hub is both king and radio tower—every move changes the net's core. [net 28–28]

### Ply 85 — White Beam (3,7)→(3,6)

White uses a Beam lane to (3,6). Long slides mean the net already covers the path. [net 28–28]

### Ply 86 — Black Command Hub (7,10)→(8,10)

Black steps the Hub toward (8,10). The Hub is both king and radio tower—every move changes the net's core. [net 28–24]

### Ply 87 — White Beam (3,6)→(2,6)

White uses a Beam lane to (2,6). Long slides mean the net already covers the path. [net 42–24 • 1 ship locked]

### Ply 88 — Black Command Hub (8,10)→(7,10)

Black steps the Hub toward (7,10). The Hub is both king and radio tower—every move changes the net's core. [net 42–28 • 1 ship locked]

### Ply 89 — White Beam (2,6)→(2,4)

White uses a Beam lane to (2,4). Long slides mean the net already covers the path. [net 42–28 • 1 ship locked]

### Ply 90 — Black Command Hub (7,10)→(7,9)

Black steps the Hub toward (7,9). The Hub is both king and radio tower—every move changes the net's core. [net 42–35 • 1 ship locked]

### Ply 91 — White Command Hub (0,6)→(1,7)

White steps the Hub toward (1,7). The Hub is both king and radio tower—every move changes the net's core. [net 35–35]

### Ply 92 — Black Command Hub (7,9)→(7,8)

Black steps the Hub toward (7,8). The Hub is both king and radio tower—every move changes the net's core. [net 35–42 • 1 ship locked]

### Ply 93 — White Command Hub (1,7)→(0,7)

White steps the Hub toward (0,7). The Hub is both king and radio tower—every move changes the net's core. [net 28–42 • 1 ship locked]

### Ply 94 — Black Command Hub (7,8)→(8,7)

Black steps the Hub toward (8,7). The Hub is both king and radio tower—every move changes the net's core. [net 28–42 • 1 ship locked]

### Ply 95 — White Beam (2,4)→(0,4)

White uses a Beam lane to (0,4). Long slides mean the net already covers the path. [net 28–42 • 1 ship locked]

### Ply 96 — Black Command Hub (8,7)→(9,6)

Black steps the Hub toward (9,6). The Hub is both king and radio tower—every move changes the net's core. [net 28–35]

**Ply 97 — White Command Hub (0,7)→(1,8)**  
 White steps the Hub toward (1,8). The Hub is both king and radio tower—every move changes the net's core. [net 30–35]

**Ply 98 — Black Command Hub (9,6)→(10,6)**  
 Black steps the Hub toward (10,6). The Hub is both king and radio tower—every move changes the net's core. [net 30–28]

**Ply 99 — White Command Hub (1,8)→(0,7)**  
 White steps the Hub toward (0,7). The Hub is both king and radio tower—every move changes the net's core. [net 28–28]

**Ply 100 — Black Command Hub (10,6)→(9,6)**  
 Ply 100: Sector Integration can now win. Coverage at or above the marker must hold—Contested Space can break a streak. Surgical Strike is still available. [net 28–35]

**Ply 101 — White Command Hub (0,7)→(1,6)**

White steps the Hub toward (1,6). The Hub is both king and radio tower—every move changes the net's core. [net 35–35]

**Ply 102 — Black Command Hub (9,6)→(9,7)**

Black steps the Hub toward (9,7). The Hub is both king and radio tower—every move changes the net's core. [net 35–35]

**Ply 103 — White Command Hub (1,6)→(0,6)**

White steps the Hub toward (0,6). The Hub is both king and radio tower—every move changes the net's core. [net 28–35]

**Ply 104 — Black Command Hub (9,7)→(9,6)**

Black steps the Hub toward (9,6). The Hub is both king and radio tower—every move changes the net's core. [net 28–35]

**Ply 105 — White Command Hub (0,6)→(1,7)**

White steps the Hub toward (1,7). The Hub is both king and radio tower—every move changes the net's core. [net 35–35]

**Ply 106 — Black Command Hub (9,6)→(8,5)**

Black steps the Hub toward (8,5). The Hub is both king and radio tower—every move changes the net's core. [net 35–42 • 2 ships locked]

**Ply 107 — White Command Hub (1,7)→(1,8)**

White steps the Hub toward (1,8). The Hub is both king and radio tower—every move changes the net's core. [net 30–42 • 2 ships locked]

**Ply 108 — Black Command Hub (8,5)→(9,5)**

Black steps the Hub toward (9,5). The Hub is both king and radio tower—every move changes the net's core. [net 30–35]

**Ply 109 — White Command Hub (1,8)→(1,9)**

White steps the Hub toward (1,9). The Hub is both king and radio tower—every move changes the net's core. [net 25–35]

**Ply 110 — Black Command Hub (9,5)→(10,6)**

Black steps the Hub toward (10,6). The Hub is both king and radio tower—every move changes the net's core. [net 25–28]

**Ply 111 — White Command Hub (1,9)→(2,8)**

White steps the Hub toward (2,8). The Hub is both king and radio tower—every move changes the net's core. [net 36–28]

**Ply 112 — Black Command Hub (10,6)→(9,5)**

Black steps the Hub toward (9,5). The Hub is both king and radio tower—every move changes the net's core. [net 36–35]

### Ply 113 — White Beam (0,4)→(0,8)

White uses a Beam lane to (0,8). Long slides mean the net already covers the path. [net 36–35]

### Ply 114 — Black Command Hub (9,5)→(10,5)

Black steps the Hub toward (10,5). The Hub is both king and radio tower—every move changes the net's core. [net 36–28]

### Ply 115 — White Command Hub (2,8)→(3,7)

White steps the Hub toward (3,7). The Hub is both king and radio tower—every move changes the net's core. [net 55–28 • 1 ship locked • **White wins**]

**Debrief.** White wins by Sector Integration. The clock only matters after activation; Surgical Strike remains the primary hunt until then. When both fleets dig in, coverage and Contested Space stop eternal turtling.
